

WINTER-PROOF PARKING

The cold season puts very special demands on a motorhome. Because the low temperatures require special measures if you want to put your MORELO First Class motorhome into a well-deserved hibernation. We have put together some useful tips for you as follows.

Water tank

1. open waste water (drain water completely)
2. open black water (drain water completely)
3. open fresh water (drain water completely)
4. open 100 l drain (drain water completely)
5. open flushing units (drain water completely)

Emptying the tank

The vehicle should be on a level surface when emptying the tank, if possible, it should be tilted to the emptying side using the air suspension or the hydraulic levelling jacks.

Water system, pump and filter

1. switch off water pump on control panel
2. open the yellow drain valve in front of the water distribution system
3. open yellow drain valve in front of heating boiler
4. drain water pump and pipes
5. remove residual water from the filter housing,
dry the filter and put it back
6. remove the filled Carawater water filter and store it in a warm place.
Then install the empty dummy.

Optional for Alde-Flow

1. open yellow drain valve in front of ALDE-Flow
2. drain water from the heating boiler

Optional with Scheer heating

1. empty the plate heat exchanger

WINTER-PROOF PARKING

Cassette toilet

1. remove the cassette and empty it completely
2. close the cassette and reinsert it

Water pipes and taps

open all taps to the middle position and let them run empty

1. kitchen sink
2. washbasin
3. shower

Flush siphons with antifreeze

1. kitchen sink
2. washbasin
3. shower

To avoid corrosion stains, remove excess antifreeze immediately!

Fixed tank toilet

1. flush siphon / bend with antifreeze

Oriental shower option

1. open water tap at the mixer tap
2. take the shower head out of the holder, pull out the hose completely and bring it to the lowest point
3. press the button on the shower head, keep it pressed and let it run empty

Optional outside shower

1. open water tap at the mixer tap
2. take the shower head out of the holder, pull out the hose completely and bring it to the lowest point
3. press the button on the shower head, keep it pressed and let it run empty

The taps remain open throughout the winter!
